The present invention is directed to a communication device for transmitting significant information between servers. The independent **claims 11 and 14** identify the uniquely distinct features "a control unit adapted to control said display unit so that information indicating that the recording of the broadcasting program is done is displayed at the time position of the analog clock upon executing the recording of the broadcasting program" and "wherein said display unit further displays program information related to a broadcasting program which is not yet recorded, although scheduled to be recorded, on the same screen displaying the analog clock". The closest prior art U.S. Patent 6,593,942 to Bushmitch et al. and U.S. Patent 6,266,295 to Parker et al. disclose Event programmers, either singularly or in combination, fail to anticipate or render the above underlined limitations obvious.
